

## Latymer Upper School

London, W6

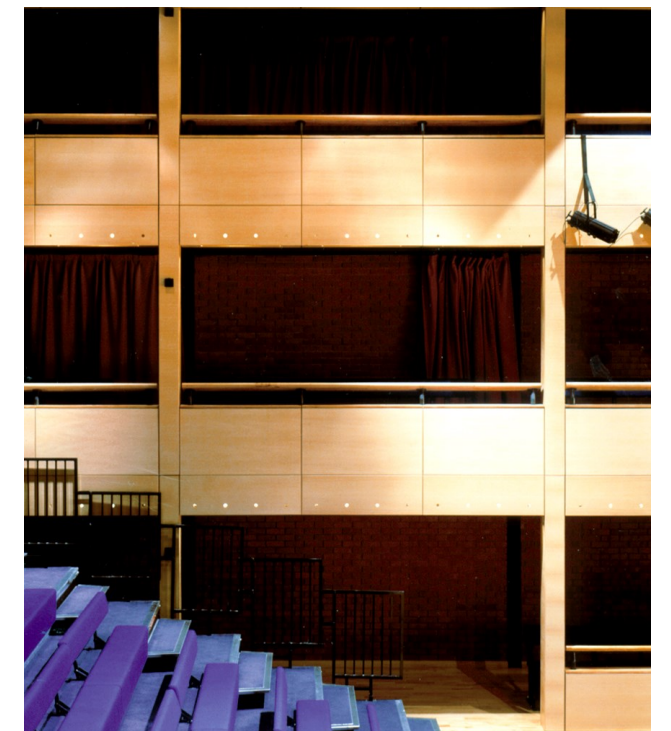

This project launched Rooff's recent track record in to performing arts buildings and has established our name within the theatre design world as a tried and tested contractor.

The scheme also introduced Rooff to architect's van Heynigen and Haward who we have since gone on to work with on other projects including the Allyn's School Performing Arts Centre in Dulwich.

The Latymer Upper School performing arts centre was of extremely high design quality designed individually for this prestigious school in West London. The building was constructed using a steel frame for the theatre and reinforced concrete frame for the remainder, the two halves being isolated to minimise sound transmission.

The works were carried out on an extremely restricted site not much larger than the footprint of the building. Maintaining close liaison with the school throughout the project helped minimise disruption and ensured the health and safety of staff and pupils were not compromised.

The scheme was won through competitive tender and was executed using a traditional form of contract. Success was achieved through an excellent working relationship amongst the entire team, and the project was completed on time and on budget.

**Client:** Latymer Upper School Governors

**Architect:** van Heynigen Haward Architects

**Quantity Surveying:** Cook & Butler

**Contract value:** £3M

**Form of Contract:** JTC 98
